

## New Prospect: Twillick Central Newfoundland Gold Belt

### License and Access

- 169 contiguous claims (42km<sup>2</sup>) in 1<sup>st</sup> and 2<sup>nd</sup> year
- Unencumbered-- Rights last held by Altius until 2007
- Year-round access via all-weather Bay d'Espoir Hwy
- Existing network of old forestry roads and ATV trails
- Proximal Green power—20km to Hydro megaplant
- Top 10 ranking of Global mining jurisdictions
- Strong local support for mining projects
- Available workforce

### Geologic Setting

- On trend with New Found Gold Queensway project— Same zone; greenstone belt; tectonic framework; and orogenic gold model; deep regional faults and Devonian age intrusions.
- Adjacent to Exploits Discovery True Grit project
- Till and lake sediment maps of Au and pathfinder elements show excellent prospectivity for gold.
- Limited outcrop due to low relief and a thin blanket of glacial till. Local glaciation limits smear to 2-3km.
- A 2005 drill hole logged pyrite, arsenopyrite and chalcopyrite infused quartz veins in deep water sediment host rock.

### New Data and Interpretation

- Hi-Res Aero-Mag flown in 2019 reveals deep regional structures with associated secondary and tertiary shear faults.
- These newly identified structures and trends are not on existing maps
- New grab & soil samples from the first exploration target assayed 193, 47 and 39ppb Au. Background is 5ppb Au.
- Active exploration programs on adjacent claims by Exploits Discovery and Sigma Mining Group.

**The Opportunity—Three distinct exploration targets on deep structures with defined shears; in the right host rock; with nearby granodiorite intrusions of the right age; and the claims are proven for gold. Existing geological maps do not match the new geophysical maps creating a first mover advantage.**

**The Ask—I'd like to option the property with commitments for 2022/23 work programs.**

Remaining 1<sup>st</sup> year spend commitment \$19K of \$25K by July 2<sup>nd</sup> 2022. An opportunity currently exists to piggy back onto a Goldspot operated Heli Geophysical/LIDAR survey on adjacent claims. This would fulfill exploration expense commitments through 2022.
